# A PRELIMINARY LIST OF

## BERKSHIRE MICRO-FUNGI

This list is based almost entirely on records and collections of the last 40 years; indeed, most come from the past two decades. It was originally intended that old collections (such few as exist containing Berkshire specimens) and literature should be searched, but this would have involved a great expenditure of time, especially as nearly all the material is unavailable in Reading. It was thought preferable to produce the list with as little delay as possible. The main object in preparing it has been to stimulate collecting. It is a relatively short list, and some groups especially are very poorly represented.

It is not possible to define rigidly what is meant by 'a micro-fungus' : there is no agreed precise limit of fruit-body size dividing micro- and macro-fungi. As interpreted here, 'micro-fungi' excludes the vast majority of the Homobasidiomycetes, as well as many Pyrenomycetes and Discomycetes. Certain plant parasites have been included even though they rank very doubtfully or not at all as micro-fungi.

A substantial number of the records are supported by voucher specimens. The principle has been to enter, for each species in the list, the earliest known specimen; this may be preceded by a record for which no specimen exists, if such a record be of earlier date; where the earliest record (unsupported by specimen) of a species is without a locality within the county it is given first, followed by the earliest record with a locality.

In cases where a fungus has been recorded on a variety of hosts (or substrata), the first entry in the list is the earliest, and the others follow in alphabetical order of hosts. In the Uredinales aecidial stages precede uredo- and teleuto-stages. Where there is more than one record on any host, all are placed together, irrespective of date, and the host is mentioned before the first.

There are many records, often with specimens, of some fungi, but considerations of space have made it necessary to limit the records for each as noted above.

Where a series of records is due to the same authority, the latter is noted after the last record of the series.

### Classification and nomenclature

The system of classification adopted is largely that of G.W. Martin found in Ainsworth, G.C. & Bisby. G.R. (1954). A dictionary of the fungi. 4th Ed. Kew. The arrangement of species within genera, and of genera in orders, is alphabetical.

Nomenclature in most groups usually follows an appropriate standard work, as under :

Myxomycetes Lister, G. (1911). A monograph of the Mycetozoa. London.

Pyrenomycetes Bisby, G.R. & Mason, E.W. (1940). List of Pyrenomycetes recorded for Britain. Trans. Brit. mycol. Soc. 24, 127-143.

Discomycetes Ramsbottom, J. & Balfour-Browne, F.L. (1951). List of Discomycetes recorded from the British Isles. Trans. Brit. mycol. Soc. 34, 38-137.

Ustilaginales Ainsworth, G.C. & Sampson, K. (1950). The British smut fungi (Ustilaginales). Kew.

Uredinales Wilson, M. & Bisby, G.R. (1954). List of British Uredinales. Trans. Brit. mycol. Soc. 37, 61-86. (Wilson & Bisby, 1954)

Sphaeropsidales and Melanconiales Grove, W.B. (1935-37). British stem and leaf fungi. Vol I, 1935 (Grove, 1935); Vol. II, 1937 (Grove, 1937). Cambridge.

Moniliales Wakefield, E.M. & Bisby, G.R. (1941). List of Hyphomycetes recorded for Britain. Trans. Brit. mycol. Soc. 25, 49-126.

The identity of many but not all specimens mentioned in the list has been checked. Thanks are due to the staff of the Commonwealth Mycological Institute for a few identifications. Doubtful records have been excluded.

The names of flowering plants are in agreement with Clapham, A.R., Tutin, T.G. & Warburg, E.F. (1952). Flora of the British Isles. Cambridge. Common names are usually employed for cultivated plants; where binomials appear, these are in accordance with one of the two following works :

Bailey, L.H. (1949). Manual of cultivated plants. New York.  
Rehder, A. (1940). Manual of cultivated trees and shrubs. New York.

Common names of plant diseases are those given by Moore, W.C. (1959). British parasitic fungi. Cambridge. (Moore, 1959)

### Synonymy

Some of the more common synonyms are given in brackets following the accepted name, and the synonyms also appear in the alphabetical arrangement, cross-referenced to the current name.

### Sources of records

Besides the works listed earlier, the following have been searched for records. After each is given, in brackets, the abbreviation used in the list (similarly for certain references listed under 'Classification and nomenclature').

### Collectors

The records of a number of collectors have contributed largely to the list; those most frequently mentioned are given below, with the initials used in the list to refer to their records. Initials followed by numbers denote herbarium specimens (living cultures in the case of DS) which are kept in the Department of Agricultural Botany, University of Reading.

## CLASS MYXOMYCETES

Brefeldia maxima Rost. Growing over various plants in garden - Caversham 1.11.58 (-McCormick - A.M. Simmonds - HO 1139).

Fuligo septica Gmel. 'Flowers of tan'. On cabbage - 1940 (Moore, 1942); cucumber beds invaded - Wokingham 11.7.47 (CP); turf above septic tank - Maidenhead 1.7.59 (A.M. Simmonds).

Physarum gyrosum Rost. On Dahlia (tuber) - Maidenhead 1.4.49 (CP).

## CLASS PHYCOMYCETES

### PLASMODIOPHORALES

Plasmodiophora brassicae Wor. Club root of crucifers. 1918 (Anon., 1920); on Brussels sprouts - Winnersh 20.4.54; on cabbage - Winnersh 9.8.50 (CP); on cauliflower - Shinfield 13.10.56 (JL 44); on kale - Wokingham 11.7.52 (CP); on swede - 1959 (PPL).

Spongospora subterranea (Wallr.) Lagerh. Powdery scab of potato. Blewbury 6.8.52 (CP).

S. subterranea (Wallr.) Lagerh. f.sp. nasturtii Toml. Crook root of watercress. Wantage 12.3.53 (CP).

### CHYTRIDIALES

Synchytrium endobioticum (Schilb.) Perc. Wart disease of potato. 1941 (PPL); Inkpen 15.9.47 (CP).

Urophlyctis alfalfa (Lagerh.) Magn. Crown wart of lucerne. Shinfield 23.9.57 (REG 126/184); on Medicago falcata L. - Shinfield 5.10.57 (REG 127/194); on M. varia Martyn - Shinfield 5.10.57 (REG 128/193).

### SAPROLEGNIALES

Saprolegnia ferax (Gruith.) Thur. On mayfly Cloeon dipterum (L.) - Tilehurst 2.3.59 (A. Price - HO 1147).

### PERONOSPORALES

Bremia lactucae Regel Downy mildew of lettuce. 1919 (Cotton, 1921); Shinfield 1946 (PPL); Reading 10.7.51 (PMO - HO 790); on Senecio jacobaea L. - Windsor 4.9.58 (HO 1120).

- Cystopus candidus (Pers. ex Chev.) Lev. White blister of crucifers.  
On marrow-stem kale (Moore, 1943); on Aubrieta - Woodley 21.4.60  
(HO 1172); on Capsella bursa-pastoris (L.) Medic. - Shinfield  
13.10.56 (JL 33); on Lunaria annua L. - Reading 1947 (PPL).
- Peronospora antirrhini Schröt. Downy mildew of Antirrhinum. Twyford  
22.6.50 (CP).
- P. arborescens (Berk.) de Bary Downy mildew of poppy. 1939 (Moore, 1943).
- P. destructor (Berk.) Casp. (= P. schleideni Unger) Downy mildew of onion. 1920 (Cotton, 1922); Reading 1945 (PPL); Shinfield 13.3.57 (JL 71); on shallot 1931 (Peth. et al., 1934).
- P. effusa (Grev. ex Desm.) Rabenh. Downy mildew of spinach. 1921 (Cotton, 1922).
- P. galligena Blum. Downy mildew of Alyssum. On A. saxatile L. - Maidenhead 18.7.52 (CP).
- P. parasitica (Fr.) Tul. Downy mildew of crucifers. On cauliflower - Reading 1927 (Peth., 1929); on Alliaria petiolata (Bieb.) Cavara & Grande - Stanford Dingley 24.5.43 (FMT - HO 1099); on Capsella bursa-pastoris (L.) Medic. - Shinfield 13.10.56 (JL 33); on cauliflower - Shinfield 21.3.58 (JL 166); on kale - Barkham 13.7.55; on stock - Winkfield 8.6.51 (CP).

#### TAPHRINALES

Note. Several species regarded by Ramsbottom & Balfour-Browne  
(1951) as belonging to Exoascus are placed here under Taphrina.

Taphrina aurea Fr., see T. populina

T. bullata (Berk.) Tul. Pear leaf blister. 1925 (Peth., 1929).

T. cerasi (Fuckel) Sadeb. Witches' broom and leaf curl of cherry.  
1932 (Peth. et al., 1934).

T. deformans (Berk.) Tul. Peach leaf curl. 1927 (Peth., 1929);  
Faringdon 11.6.51 (CP); on almond - Reading 2.6.57 (JL 113).

T. minor Sadeb. (? = T. cerasi) On cherry - 1927 (Peth., 1929);  
Harwell 27.4.48 (CP).

T. populina Fr. (= T. aurea Fr.) Yellow leaf blister of poplar.  
Bracknell 15.9.52 (CP).

#### MYRIANGIALES

Elsinoe veneta (Burkh.) Jenk. (= Plectodiscella veneta Burkh.; stat.  
conid. Gloeosporium venetum Speg.) Cane spot of raspberry and  
loganberry. On loganberry - 1926 (Peth., 1929); on raspberry  
(Grove, 1937); Shinfield 29.6.43 (JPC 36).

Plectodiscella veneta Burkh., see Elsinoe veneta

DOTHIDEALES

Cymadothea trifolii Wolf (= Dothidella trifolii Bayl.-Ell. & Stansf.)

Black blotch of clover. On crimson clover and wild white clover - 1922 (Peth., 1926); on Trifolium pratense L. - Sonning 29.11.56 (REG 22/21); on T. repens L. - Windsor 4.9.58 (HO 1126).

Dothidella trifolii Bayl.-Ell. & Stansf., see Cymadothea trifolii

Phyllachora graminis (Pers. ex Fr.) Fuckel Black leaf spot of grasses.

On Dactylis glomerata L. - Shinfield 11.2.54 (GAC 4); on Agropyron caninum (L.) Beauv. - Shinfield 20.2.54 (GAC 6).

Plowrightia ribesiae (Pers. ex Fr.) Sacc. Black pustule of currant.

On red currant - 1920-21 (Cotton, 1922).

ERYSIPHALES

Erysiphe cichoracearum DC.
